

A PROVEN SOLUTION FOR DUMPSTER ODORS.

Designed to control malodors and offensive smells from waste, the ZEROdor unit mounts onto the outside of any type of metal or poly dumpster.

With no moving parts or power required, the unit automatically dispenses a measured dose of ZEROdor granules after each dumping. Most units only require granule replacement 4-6 times per year, and with no moving parts operation is automatic and simple.

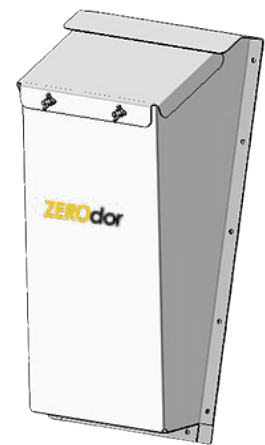

HOW IT WORKS

ZEROdor dispensers do not rely on any external power supply, but harness the dumping action which takes place when the waste container is emptied. Upon inversion, the lower chamber of the Dispersion Unit is filled, and as the container is turned upright again, the ZEROdor Granules are dispersed and spread across the bottom of the waste container. ZEROdor Granules eliminate malodors and absorb bacteria-friendly moisture and the exact amount needed is replaced. automatically each time the container is emptied, eliminating waste.

SPECIFICATIONS

Overall Size:	16 ga. Steel Housing with Weather-Tight Lid
Capacity:	20 lbs of ZEROdor Granules
Finish:	Durable Gray Powder Coated
Warrenty:	2 Years
Install:	Mounts on any Front-Load or Rear-Load Waste Container

*SPECIFICATIONS MAY CHANGE WITHOUT NOTICE

We Innovate Waste.

ZEROdor™ Granules destroy a wide variety of malodors common in solid waste containers, finally providing a reliable and effective solution for a difficult industry problem.

ZEROdor Granules are made of a dried clay compound which is highly effective for absorbing moisture quickly, further reducing areas where bacteria can reproduce.

Emitting a pleasant lemon citrus scent, the granules are among the most powerful odor solutions on the market today, highly effective on problematic odors including vomit, feces, rotting food and garbage, and much more.

HIGHLY EFFECTIVE - SAFE - POWERFUL

- Destroys Odors Quickly & Effectively
- Absorbs Moisture
- Available in 25lb Containers / 18 Containers Per Skid

When applied using the ZEROdor Dispersion Unit, the exact amount is dispensed into the waste container, utilizing the dumping inversion action and requiring no power source or mechanical action.
